Transitioning to Product Management as a data-driven Software Engineer with 2 years of experience. Passionate about bridging technical complexity with seamless user experiences to solve customer pain points and drive product growth. Recognized for award-winning business and marketing strategy, I excel at leverage data to uncover user needs and define clear requirements. I bring unique ability to align cross-functional teams and balance technical constraints with business to deliver high-impact solutions.

SKILLS

Product & Strategy: Product Lifecycle Management, Product Strategy, MVP Definition & Scoping, User Journey Mapping, UI/UX Prototyping, Stakeholder Alignment, AI/LLM Product Strategy.

Data & Analytics: Data-Driven Decision Making, Data Analytics, KPI & Metrics Tracking, FinOps Cost Optimization.

Technical: Go, Python, Java, NodeJS, AWS, GCP, Docker, Kubernetes, SQL, BigQuery, Looker, ADK.

EDUCATION & AWARDS

Royal Melbourne Institute of Technology: Bachelor of Information Technology | *GPA: 3.6/4.0 (Scholar's List)*

National Champion: RMIT Business Analytics Competition (1st out of 1,200+)

Top 30 National Team: Unilever Future Leader League Business Case (Top 30 out of 2,500+ competitors)

WORK & LEADERSHIP EXPERIENCE

HCLTech x ANZx - ANZ Plus - Back-end & Platform Engineer

[May 2024 – Current]

- Led the end-to-end lifecycle of a Multi-Agent Analytics Chatbot from concept to deployment to streamline bank re-verification analysis processes. Enabled self-service data discovery for business stakeholders by implementing NLP that automates SQL generation, query execution, and dynamic chart visualization.
- Partnered with teams to launch the Multi-party Banking Product, defining data model transition strategies for complex user relationships while ensuring 100% backward compatibility. Drove UX improvements by optimizing API SLAs, successfully reducing invite-flow latency to sub-second levels (<700ms).
- Advanced an internal FinOps product initiative, conducting research to define key metrics for Google Cloud waste monitoring and target utilization. Delivered a Looker Studio dashboard to highlight specific billing usage of development teams and corresponding addressable waste, optimized Google CUDs to reduce infrastructure costs, and eliminated manual financial data entry and processing for business analysts via automated Python pipelines.
- Collaborated on delivering secure Joint-Account workflows. Architected a resilient Fulfilment Engine for Account Origination, replacing legacy custom polling with Temporal workflows to guarantee 99.99% reliability.

Procter & Gamble Vietnam - IT Intern Co-op/ Management, Global Business Service

[9/2023 – 12/2023]

- Led a global SU/Pallet tracking initiative for the Global Grooming Business Unit to optimize shipment volumes and reduce costs. Managed up to 20 cross-functional stakeholders (Logistics, Analytics, Transportation) across North America, Europe, and APAC, scaling regional data solutions by adapting Europe's DOMO dashboard for AMA + GC regions and conducting NA Pallet Fit analysis to pinpoint top opportunity material codes for the APAC market.
- Owned the Sustainability Dashboard Automation solution for Material Packaging Design at the P&G Ben Cat plant. Leveraged Python to replace manual workflows, successfully improving data accuracy and reducing processing time by up to 94%.

PROJECTS

E-Commerce Live Auction Feature [[View Product Design](#)]

- Led the end-to-end design and product requirements for an e-commerce live auction feature as the core Product Owner. Created high-fidelity UI mockups for both the customer-facing mobile app (live bidding mechanics, earn-turns hub) and the internal back office campaign configuration dashboard.
- Navigated technical pushback by negotiating feature scope against engineering constraints and effort to define a realistic MVP and guaranteed timely delivery. Bridged design and engineering by mapping user journey flows directly to system architecture, ensuring all proposed features were technically viable to build.

RetroLab - AI-Powered Technology News Platform [[View Live Site](#)]

- Directed the 0-to-1 lifecycle of an AI-powered media platform localized for the Vietnamese tech market, from initial market research to live deployment. Built custom automated workflows that transformed multi-language sources into original content at scale, successfully reducing editorial production time by 90%.
- Optimized platform architecture by designing a multi-provider LLM strategy with built-in FinOps token tracking, routing routine tasks to free local models to reduce inference costs. Evaluated and integrated Notion as a zero-cost headless CMS, eliminating server overhead and onboarding friction.
